Here is my summary from 11-16, which describes the upper 196-ft of UWBZ37/LSZ53. Note that, in the second bullet, I state the dye test at 147-ft. was negative. The little ball looked white to me, but when I was talking to the AMEC field geologist on the next site visit and reviewing the results, she said it looked a little pink to her and she noted it as positive. Based on what I saw and smelled, I don't expect to see NAPL at that location, but you never know. They did not construct a CZ well there, and plan to propose a new step-out location for that.

Steve

Wayne – thanks for providing these – they are helpful. This report says hydrocarbons odors were previously reported in well UWBZ37/LSZ53 – I don't think I have that report, could you please forward that one as well? Thanks Eva

Wayne,

Here is my report for today's site visit to ST012. I haven't been able to include photos on the last few reports because for some reason, I can't get my laptop to recognize my phone. Maybe I can get that straightened out this

weekend. Drilling will continue this weekend with the nested well east of Sossaman Rd. I'll probably go out there on Sunday to check the status.
